

The new Graef stainless steel electric kettles WK501 & WK502 - innovative, compact, quick

With the new 1-liter stainless steel electric kettles WK501 in white or the WK 502 in black you get a multifunctional kitchen helper which doesn't only heats up water to different temperatures but warms up **baby food**. You can even vaporize and therefore disinfect **baby bottles**. The kettle becomes a reliable companion for young families, design-oriented people, coffee- and tea drinkers.

As the first kettle on the market, the new Graef kettle with the **innovative Vapo-Program** sets new standards in terms of multifunctionality. Via the base station with **intuitive touch-display** you can start the vaporization process: the baby bottle gets positioned upside down into the **included basket insert**. After 4 minutes the bottle is already vaporized. To heat up baby food, the glass is also positioned in the basket insert. With the 40°C- and the keep-warm-button the glass gets gently warmed up to the optimal temperature. The 1-liter stainless steel electric kettle WK501/502 is equipped with a **30 minutes keep-warm-function**. Even when you lift-off the kettle from its base station, the keep-warm-function remains activated and reheats the water up to the previously adjusted temperature after you put the kettle back on the base station.

As a coffee specialist Graef offers the right equipment for the traditional handbrew-preparation, also known as "Pour Over". Due to the fresh grinding of high quality coffee beans, the right infusion and above all, optimal water temperatures, it is possible to prepare an aromatic, pleasant-tasting and individual coffee. Like the current models **WK 701/702/900/902** the new Electric Kettles WK501/502 are also equipped with the **innovative handbrew-button for filter coffee**. Due to this, you can brew the optimal handbrewed coffee for which a water temperature between 90°C and 96°C is ideal. Therefore, a temperature automatic is realized by a built-in temperature sensor and can guarantee exact temperatures of up to +/- 3°C. The **interior filling level indicator** ensures a precise water dosage.

Next to the 40°C- and handbrew-button, the new stainless steel electric kettles WK 501/502 also offer the possibility to boil water and heat it up at the push of a button to 60°C, 70°C respectively 80°C. Therefore, the kettle is also ideal for the preparation of different types of tea or instant drinks.

Like all electric kettles of the Graef assortment the models WK 501/502 of course comes with a boil-dry and overheating protection, a removable stainless steel lime filter, a 360° central contact as well as a lid opening at the push of a button. Visually, the stainless steel electric kettles impress with their classic design and its **double-walled housing**.
