

**Press Release, Cor.Speed Sports Wheels Europe:
New flow-formed wheel Kharma makes its debut at the Essen Motor Show 2019**

With the Essen Motor Show just around the corner, this marks the last major trade fair event of the 2019 tuning season, and of course, the specialists from Cor.Speed Sports Wheels will be there, alongside all major industry players. They will be showcasing their brand-new rim design, which will be celebrating its world premiere at the exhibition in the Ruhr.

Thanks to the ultra-modern flow-forming manufacturing process – which will eventually be used for all Cor.Speed rims from now on – the wheel is feather-light: Its weight starts at a mere 10.1 kg, depending on size and bolt circle, which means that fuel consumption and therefore CO₂ emissions can be reduced compared to other wheels. On top of that, the extremely high load capacity of 950 kg per rim means they can even be used in luxury sedans, SUVs and the like.

To start with, the Kharma is available in the dimensions 8.5x19" or 10x20" and with the bolt circles 5x108, 5x112, 5x114.3 and 5x120. In terms of color, customers can choose between classic brushed silver and gloss brushed bronze.

And as for the aesthetics, the wheel is a stylistically unique and modern re-interpretation of the double-spoke design, which stands out thanks to its dynamic, three-dimensional and asymmetrical look. Another striking feature is the wheel's pronounced concavity, which reaches eight centimeters in the 10x20" Extreme Concave version.

You can see the Cor.Speed Kharma for yourself at the JMS Fahrzeugteile stand 7D23 in Hall 7 at the Essen Motor Show, which will take place from November 29 to December 8.
