Cupra on a big foot: 21-inch DeVille rims on the Ateca top model**

In terms of size, the Seat Ateca is the middle of the three SUVs from Seat - so far, so good. The 300 hp and 400 Nm top model, on the other hand, no longer bears the name of the parent company, after all, the Cupra label has since been split off as its own brand. The sports SUV is simply called Cupra Ateca - it sounds strange, but it's still correct. Of course, this does not affect the fact that the dynamically designed all-wheel drive is ideally suited as a basis for tuning conversions. This is proven by this example, which is equipped with a set of high-quality rims from Cor.Speed Sports Wheels, among other things.

The rather large wheel arches offer enough space for the DeVille light alloy rims in the generous dimensions of 9x21 inches, which are characterized by ten powerfully drawn spokes. With regard to the finish, the choice fell on the classic silver brushed, the mounted tires measure 245/30R21. The well-proven racing bolts from the Cor.Speed sister brand Barracuda Racing Wheels are also used. They skillfully set colored accents, after all they are made here in red and bronze. The additional lowering of the Cupra, which is partly skilfully staged in the pictures by the Cor.Speed ambassador Sabrina Doberstein, was finally brought about with the help of KW coil springs.

Breathtaking videos and pictures from Cor.Speed are available on the YouTube channel "Corspeed Sports Wheels" and interactively on the Instagram profile "corspeed.sports.wheels" or the Facebook page "Barracuda Europe Racing Wheels". The light alloy wheels from the extensive Cor.Speed rim program are available from car dealerships or from well-stocked tire and specialist shops. Alternatively, like all facts and price and delivery information, it is available directly from:
