“myOpel” App Now with Functions Tailored to Opel Corsa-e and Opel Grandland X Plug-in-Hybrid

- Clever: check the range, enjoy comfort features and save money
- Intelligent: range forecast considers personal driving style
- Preconditioning: set comfortable interior temperatures before the trip begins

Rüsselsheim. How much range is left? How can I charge my Opel Corsa-e or Grandland X Plug-in-Hybrid as cheaply as possible and how can I simply precondition the interior? The new “myOpel” app delivers the answers to these questions. With the app and a smartphone, you can find out the state of charge, select the charging time and start the air conditioning at any time. The “myOpel” app also gives reminders about important appointments, such as for servicing.

A clever system calculates the range displayed by the “myOpel” app. It not only considers the state of charge of the battery, but also the previous driving style. If the Corsa-e is driven particularly efficiently, this energy-saving driving style is reflected accordingly in the range. However, if the Corsa-e is driven more sportily, the display shows a different range forecast, even if the state of charge was identical. The realistic range forecasts therefore make the “myOpel” app a reliable partner for the next journey.

Programme charging times and use cheaper electricity

The second remote-controlled function concerns charging management. When the Corsa-e or Grandland X Plug-in-Hybrid is plugged in, users can specify a certain time when charging should begin. If electricity is cheaper at night and higher prices during the day are avoided, this can save money.

The Corsa-e as well as the Grandland X Plug-in-Hybrid also features as standard air conditioning that can be programmed via the “myOpel” app. Preconditioning allows setting of the interior temperature before the drive has even begun, regardless of whether the outside temperature is minus 10 or plus 30 degrees Celsius.

About Opel

Opel is one of the largest European car manufacturers and was founded by Adam Opel in Rüsselsheim, Germany, in 1862. The company started building automobiles in 1899. Opel has been part of the [Groupe PSA](#) since August 2017. Together with its British sister brand Vauxhall, the company is represented in more than 60 countries around the globe selling around one million vehicles in 2019. Opel is currently implementing its electrification strategy to secure sustainable success and ensure that the future mobility demands of customers are met. By 2024, all Opel models will offer an electric variant. This strategy is part of the company plan [PACE!](#) with which Opel will become sustainably profitable, global and electric.
