

**Press release Barracuda Racing Wheels Europe:  
Light flow forming wheels on the US muscle car - Mustang GT on Ultralight Project 2.0**

The Ford Mustang is undoubtedly one of the world's best-known, most popular, and downright legendary sports coupés that the market has to offer. The muscle car has been able to increase its distribution and presence around the globe significantly in recent years - after all, the current generation LAE is now officially on sale in Europe, for example, via Ford. Nevertheless, this Mustang GT of the pre-facelift version is a vehicle in US specification, which was placed on high-quality wheels from Barracuda Racing Wheels - the brand that is an excellent choice for in the sector of extraordinary high-end wheels for individualists.

The V8 athlete stands on a set of Project 2.0 alloy wheels from Barracuda's Ultralight Series. These stand for a sporty look and great performance in connection with light weights - thanks to the production in the modern flow forming process. The wheels in the dimensions 9x20 inches (concave) on the front axle and 10.5x20 inches (deep concave) on the rear axle only weigh about 11 kilograms. The rims are fitted with tires of the dimensions 255 / 35ZR20 and 275 / 35ZR20. The gunmetal finish goes perfectly with the gray paintwork of the body.

The same applies to the other adjustments such as the "5.0" emblems on the side and the Mustang logo in the radiator grille, each in black. The car also has other customizations such as the slightly larger spoiler lip on the front or the louvers in front of the rear side windows.

Breathtaking videos from Barracuda are available on the YouTube channel "Barracuda Racing Wheels" or interactively on the Instagram profile "barracuda.wheels". The light alloy wheels from the extensive Barracuda rim program are available from car dealerships or from well-stocked tire and specialist shops. Alternatively, they are available as well as all other facts as well as price and delivery information directly from:
