

**Press release Cor.Speed Sports Wheels Europe:
City SUV Hyundai Kona on large DeVille alloy wheels**

Whoever is on the road in the tuning scene with a Hyundai is currently driving the extremely successful i30 N in most cases. But the Koreans have a second interesting, youthful model in their program with the Kona. Even before the N-Top model, which will soon follow, will increase its popularity even further, this example shows that the series is quite well suited for further individualizing tuning conversions: It was equipped with a set of high-quality Cor.Speed Sports Wheels.

The concave, powerfully designed Cor.Speed DeVille wheels rotate on the axles of the small SUV, which is staged here together with the well-known model Sabrina Doberstein, who acts as a brand ambassador for Cor.Speed. The wheels have the dimensions 8.5x19 inches and look exceptionally large thanks to the ten spokes that run far to the rim edge. This means that the DeVille is the perfect size for the Kona and makes the car appear both compact and compact as well as sporty. The finish in Silver Brushed, whose brushed fronts provide a unique look, is also a real highlight. The wheels are covered with 235/40R19 tires. A suitable parts certificate is of course available

Breathtaking videos and pictures from Cor.Speed are available on the YouTube channel "Corspeed Sports Wheels" and interactively on the Instagram profile "corspeed.sports.wheels" or the Facebook page "Barracuda Europe Racing Wheels". The light alloy wheels from the extensive Cor.Speed rim range are available in car dealerships or from well-stocked tire and specialist retailers. Alternatively, like all facts and price and delivery information, they are available directly from:
