Cor.Speed meets Bilic Car Styling: New Atmos wheels on the S-Class Coupé

Just recently, the brand Cor.Speed Sports Wheels, known for trendy and high-quality rims, presented the new wheel design Atmos. With its 22-inch format and multispoke styling that is as sporty as it is elegant, it is aimed in particular at owners of large SUVs and luxury liners. In the form of the S-Class Coupé of the C217 series presented here, the first vehicle has already been created on which the Atmos wheels set absolute highlights.

The specialists from Bilic Car Styling from Urdorf near Zurich in Switzerland are responsible for the conversion of the large two-door car from Stuttgart. They chose the Atmos wheels, which are produced using the weight-saving flow-forming process and measure 9.5x22 inches (concave) for the front axle and even 10.5x22 inches (deep concave) for the rear axle. The associated Michelin Pilot Sport 4 S tires measure 255/30ZR22 and 295/35ZR22 respectively. With its classic finish in hyper silver, the rim, which is characterized by a very harmonious styling, looks very classy down to the last detail. At the same time, it goes so well with the silver paintwork of the elegant luxury liner.

Of course, the Mercedes also received a lowering. This makes it even more solid on the road and the wheels are more consistent under the fenders. It was brought about by means of a module for the factory air suspension. By the way: For those who want it a little bigger, the Atmos is alternatively available even wider in the size 11.5x22 inches.
