

**Press Release Cor.Speed Sports Wheels Europe  
Cor.Speed Deville on the Mercedes S 500 L in AMG outfit**

No doubt: connoisseurs and fans undoubtedly identify the Mercedes S-Class of the W222 series presented here as an example of the powerful AMG model S 63. However, this assumption is actually wrong. This mistake is by no means dramatic, but rather completely understandable. Finally, Kevin M.'s car, actually an S 500 in the long version, was subsequently converted to the look of the AMG with genuine original parts. The Stuttgarter also received additional customization in the form of a high-quality set of wheels from Cor.Speed Sports Wheels.

The choice fell on the Deville wheels, with their powerful design and generous sizes, which are ideal for large luxury cars or SUVs. In this case they measure 9.5x22 inches on the front and 10.5x22 inches on the rear axle. With their glossy black finish, they fit perfectly into the color scheme of the dark black bodywork, which is completely devoid of chrome trim. The tires have the dimensions 255/30R22 and 295/25R22.

The only splash of color on the S 500 L, which makes it even more eye-catching, are the brake calipers flashing out from behind the wheels. They are now painted in gold, like the carbon ceramic brake system available ex works for the AMG models. Last but not least, the significantly reduced ground clearance is also obvious. This is thanks to an electronic lowering module for the air suspension of the S-Class.

Breathtaking videos and pictures from Cor.Speed are available on the YouTube channel "Corspeed Sports Wheels" as well as interactively on the Instagram profile "corspeed.sports.wheels" or the Facebook page "Barracuda Europe Racing Wheels". The light alloy wheels from the extensive Cor.Speed rim range are available from car dealerships or well-stocked tire and specialist retailers.
