

**Press release Barracuda Racing Wheels Europe
Barracuda Project 2.0 on the Sporty Electric Audi RS e-tron GT**

One of the sleekest, most powerful, and fastest models in Audi's lineup is undoubtedly the RS e-tron GT. Admittedly, it's a fully electric vehicle, which may not be everyone's cup of tea. However, for those who can and want to embrace it, they get a high-performance sports sedan par excellence. With its dynamic design, it is the perfect candidate for customization and upgrades. The example shown here, for instance, has been fitted with a premium set of wheels from Barracuda Racing Wheels.

The team at Reifen Winkel in Wilnsdorf, responsible for the conversion, installed Barracuda's Project 2.0 wheels from the Ultralight Series on the electric sedan. Like all wheels in this series, they are made using the weight-saving Flow Forged process. In the chosen sizes of 10x22 and 11.5x22 inches, they weigh just 12.4 and 12.6 kilograms, respectively. The wheels feature a Black Brushed finish, which emphasizes the high-tech character of the Project 2.0. The tires are sized 255/30ZR22 and 305/25ZR22. Of course the wheels come with the corresponding part certificate.

The lowering of the vehicle was achieved by Reifen Winkel through a modification of the RS e-tron GT's factory air suspension.
