

**Press release Barracuda Racing Wheels:  
Barracuda Ultralight Project 2.0 for BMW M3 and M4**

With 431 hp from its TwinPower Turbo straight six motor and rear-wheel drive, the BMW M4 is one of the most popular middle class sports coupes, and a firm favourite with keen drivers.

However, driving enthusiasts always want to optimise performance, and the logical first step is a set of high quality lightweight alloy wheels, which delivers good looks as well as lower unsprung weight for improved handling.

A good choice for the M4 owner would be the ten-spoke Barracuda Racing Wheels Ultralight Project 2.0 wheel. Sized 9.0x20-inch (579 euros) in front, and 10.5x20-inch (619 euros) at the rear, and shod with 255/30ZR20 and 285/30ZR20 tyres, these wheels fit the M4 coupe and convertible as well as its four-door M3 brother. Thanks to the flow-forming production process, these Ultralight series wheels weight a modest 10.7 kg and 10.9 kg respectively.

To complement the new look as well as the driving dynamics of these M cars, a good pairing is the KW Variant 3 coilover suspension kit, which can be adjusted for ride height as well as independent bounce and rebound control.

JMS Fahrzeugteile are distributors for a comprehensive range of BMW tuning components such as engine upgrades, sports exhaust systems, and body styling kits.
