

Press release Cor.Speed Sports Wheels Europe Lowered Audi A6 Sedan on Cor.Speed Deville Wheels

The business class cars at Audi are currently undergoing a transformation. In the future, the Ingolstadt-based brand will pursue a dual strategy. After the fully electric A6 e-tron debuted in 2024, its sibling, now called the A7, powered by (hybridized) internal combustion engines, is expected to make its premiere in the coming months. Looking back two generations, we find a time when things were simpler: back then, there was just one A6 model, mostly with pure combustion engines, only one hybrid variant, and no electric vehicle. The sedan featured here, from the C7 (4G) generation, has been upgraded with a set of high-quality wheels from Cor.Speed Sports Wheels.

The Audi is equipped with Deville wheels all around, sized 9x21 inches, paired with Hankook S1 evo3 tires in the 255/30R21 dimension. With their custom finish in bronze, the wheels create a strong contrast to the black paintwork. Of course, the Deville wheels come with the corresponding part certificate. They also offer excellent brake clearance, making them compatible with almost any brake system. The car's lowered stance was achieved through a modification of the factory air suspension.

Additionally, the Audi features several other customizations, such as a grille inspired by the top-of-the-line RS 6 model, a carbon-look rear diffuser, and a Remus sports exhaust system. The exhaust features tailpipes wrapped in carbon.

Breathtaking videos and pictures from Cor.Speed are available on the YouTube channel "Corspeed Sports Wheels" or interactively on the Instagram profile "corspeed.sports.wheels" or the Facebook page "Barracuda Europe Racing Wheels". The light alloy wheels from the extensive Cor.Speed rim range are available from car dealerships or well-stocked tire and specialist retailers.
