**Ford Hot Hatch as a Unique Eye-Catcher: Focus RS on Barracuda Dragoons**

RS is a widely recognized and cross-brand abbreviation for particularly sporty and, accordingly, usually high-performance model versions. This is, of course, no different with Ford. Until 2018, the hot hatch Focus RS thrilled numerous petrolheads with up to 350 hp across three generations. The example presented here from the final series received a unique look with the help of a high-quality set of Barracuda Racing Wheels and other upgrades.

The wheel choice specifically involved the Dagoon rims, which feature a dynamically asymmetrical design with a classic Highgloss Silver finish. They are mounted on the front axle in the 8.5x19-inch "Concave" version, while the "Extreme Concave" version in 9x19 inches was installed at the rear. The tires are 235/35R19 all around. Thanks to the Flow Forged production method, the Dagoon wheels, which belong to Barracuda's Ultralight Series, are characterized by particularly low weight.

The installation of a coilover suspension was, of course, almost mandatory. In this case, it comes from ST suspensions and not only positions the new wheels perfectly under the fenders but also enhances the driving dynamics of the RS. Furthermore, the all-wheel-drive hot hatch draws attention with its distinctive full wrap. The Endless Car Wrapping team wrapped it in Coral Peach, which shifts between orange, yellow, red, and pink tones depending on the light.

Last but not least, the Ford received an even sportier touch thanks to body parts such as the spoiler lip and side canards at the front.

Breathtaking videos from Barracuda are available on the YouTube channel "Barracuda Racing Wheels" or interactively on the Instagram profile "barracuda.wheels" or the Facebook page "Barracuda Europe Racing Wheels". The light alloy wheels from the extensive Barracuda rim range are available from car dealerships or well-stocked tire and specialist retailers.
